NOTE

1. *Singapore Standards (SSs) and Technical References (TRs) are reviewed periodically to keep abreast of technical changes, technological developments and industry practices. The changes are documented through the issue of either amendments or revisions.*
2. *An SS or TR is voluntary in nature except when it is made mandatory by a regulatory authority. It can also be cited in contracts making its application a business necessity. Users are advised to assess and determine whether the SS or TR is suitable for their intended use or purpose. If required, they should refer to the relevant professionals or experts for advice on the use of the document. Enterprise Singapore shall not be liable for any damages whether directly or indirectly suffered by anyone or any organisation as a result of the use of any SS or TR.*
3. *Compliance with a SS or TR does not exempt users from any legal obligations.*

Foreword _____	7
Section One – General requirements and a.c. electric vehicle charging station	
1.1 Scope and objective _____	9
1.2 Normative references _____	9
1.3 Definitions – a.c. charging _____	12
1.4 General requirements _____	16
1.5 Source of supply _____	19
1.6 Modes of EV charging and control pilot function _____	20
1.7 Protection against electric shock _____	26
1.8 Connection between the power supply and the EV _____	29
1.9 Specific requirements for vehicle inlet, connector, plug and socket-outlet _____	32
1.10 Charging cable assembly requirements _____	34
1.11 EV supply equipment requirements _____	36
1.12 Installation requirements for EV public charging station _____	46
Section Two – General requirements and d.c. electric vehicle charging station using Mode 4 charging	
2.1 Scope _____	50
2.2 Normative references _____	50
2.3 Definitions – d.c. charging _____	50
2.4 General requirements _____	52
2.5 Rating of the supply a.c. voltage _____	52
2.6 General system requirement and interface _____	52
2.7 Protection against electric shock _____	59
2.8 Connection between the power supply and the EV _____	61
2.9 Specific requirements for vehicle inlet and vehicle connector _____	62
2.10 Charging cable assembly requirements _____	63
2.11 EV supply equipment requirements _____	64
2.12 Specific requirements for d.c. EV charging station _____	73
2.13 Communication between EV and d.c. EV charging station _____	77
Annexes to Section One	
A (normative) Control pilot function through a control pilot circuit using a PWM signal and a control pilot wire _____	82
B (normative) Proximity detection for the basic interface _____	115

	Page
C (normative) Vehicle coupler Type 1 _____	117
D (normative) Illustrations of EV modes of charging _____	122
E (normative) Vehicle coupler Type 2 _____	125

Annexes to Section Two

AA-(1) (normative) D.C. EV charging station of System A (CHAdeMO) _____	130
AA-(2) (normative) Vehicle coupler, Configuration AA (CHAdeMO) 200 A, 600 V d.c. _____	143
BB <i>Reserved for future use</i> _____	156
CC-(1) (normative) D.C. EV charging station of System C (combined charging system) _____	157
CC-(2) (normative) Vehicle coupler, Configuration EE 200 A, 600 V d.c. _____	172
DD <i>Reserved for future use</i> _____	181
EE (informative) Typical configuration of d.c. charging system _____	182
FF (normative) Vehicle coupler, Configuration FF 200 A, 1000 V d.c. All modes _____	183

Tables

1.1 Overview of the basic vehicle interface, Type 1, single-phase _____	30
1.2 Overview of the basic vehicle interface, Type 2, three-phase or single-phase _____	30
1.3 Modes and permissible connections _____	32
1.4 Touch current limits _____	40
2.1 Conductive disturbance limit at d.c. charging cable (frequency range 150 kHz to 30 MHz) _____	72
2.2 Limit values of low frequency radiated disturbance emission of d.c. EV charging station _____	73
2.3 Current ripple limit of d.c. EV charging station _____	76
2.4 Charging state of d.c. EV charging station _____	78
2.5 Charging control process of d.c. EV charging station at system action level _____	80
A.1 Maximum allowable high frequency signal voltages on control pilot conductor and the protective conductor _____	85
A.2 Control pilot circuit parameters and values for the EV supply equipment _____	86
A.3 EV control pilot circuit values and parameters and values for the EV _____	87
A.4 System states detected by the EV supply equipment _____	87
A.5 State behaviour _____	89
A.6 List of sequences _____	92
A.7 Pilot duty cycle provided by EV supply equipment _____	103
A.8 Maximum current to be drawn by vehicle _____	104
A.9 Test resistance values _____	105
A.10 Parameters of control pilot voltages _____	106

	Page
A.11 Test parameters of control pilot signals _____	107
A.12 Parameters for sequence tests _____	107
A.13 Position of switches _____	111
A.14 Initial settings of the potentiometer at the beginning of each test _____	112
B.1 Component values proximity circuit without current coding _____	116
AA.1 Definition of symbols in Figure AA.1 and Figure AA.2 _____	132
AA.2 Parameters and values for interface circuit in Figure AA.2 _____	133
AA.3 Principle of fault protection _____	133
AA.4 Requirements for earth fault monitoring _____	135
AA.5 Recommended specification of charging current requested by the vehicle _____	141
AA.6 Requirements for the output response performance of d.c. EV charging station _____	142
CC.1 D.C. couplers and maximum system output voltage for combined charging system _____	157
CC.2 Definition of proximity resistor for Configuration FF _____	157
CC.3 Sequence diagram for normal start-up _____	160
CC.4 Sequence description for normal shutdown _____	162
CC.5 Definition and description of symbols / terms _____	171
FF.1 Functionality of the contacts for d.c. Configuration FF _____	183

Figures

1.1 Definition of cable connection methods and recommended practices _____	22
2.1 Overvoltage protection in case of earth fault _____	57
2.2 Measuring network of touch current weighted for perception or reaction _____	67
2.3 Step response for constant value control _____	75
2.4 Current ripple measurement equipment with capacitor _____	76
2.5 Maximum ratings for voltage dynamics _____	77
A.1 Typical control pilot circuit (equivalent circuit) _____	83
A.2 Simplified control pilot circuit (equivalent circuit) _____	84
A.3 State diagram for typical control pilot (informative) _____	90
A.4 State diagram for simplified control pilot (informative) _____	91
A.5 Test sequence using typical control pilot circuit _____	108
A.6 Test sequence using simplified control pilot circuit _____	108
A.7 Optional test sequence with interruption by EV supply equipment _____	108
A.8 Example of a test circuit (EV simulator) _____	109
B.1 Equivalent circuit diagram for proximity function using an auxiliary switch and no current coding _____	115
AA.1 Overall schematic of System A station and EV _____	130
AA.2 Interface circuit for charging control of System A station _____	131
AA.3 Failure detection principle by detection of d.c. leakage current _____	134

	Page
AA.4 Example of vehicle connector latch and lock monitoring circuit _____	136
AA.5 State transition diagram of charging process for System A _____	139
AA.6 Sequence diagram of System A _____	140
AA.7 Charging current value requested by the vehicle _____	141
AA.8 Output response performance of d.c. EV charging station _____	142
CC.1 Sequence diagram for normal start-up _____	159
CC.2 Sequence diagram and description for normal shutdown _____	161
CC.3 Sequence diagram for d.c. supply initiated emergency shutdown _____	163
CC.4 Sequence diagram for EV initiated emergency shutdown _____	165
CC.5 Special components for wZ coupler _____	168
CC.6 System schematics of combo d.c. charging system _____	170
EE.1 Typical configuration of d.c. charging system _____	182

Foreword

This Technical Reference (TR) was prepared by the Technical Committee on Electric Vehicles under the purview of the Electrical and Electronic Standards Committee (EESC). It was endorsed by the EESC on 21 July 2016.

This TR was revised to further align with the international requirements IEC 61851 series and IEC 62196 series of standards. Section One retains most of the requirements of the 2010 edition of the TR and includes requirements for a.c. charging using Type 2 vehicle coupler and accessories. The control pilot function requirement using PWM signal was also updated. New requirements covering d.c. charging stations and accessories are covered in Section Two. Requirements for “Energy transfer from vehicle to grid” are not considered in this revision.

This TR is a provisional standard made available for application over a period of two years. The aim is to use the experience gained to update the TR so that it can be adopted as a Singapore Standard. Users of the TR are invited to provide feedback on its technical content, clarity and ease of use. Feedback can be submitted using the form provided in the TR. At the end of the two years, the TR will be reviewed, taking into account any feedback or other considerations, to further its development into a Singapore Standard if found suitable.

In preparing this TR, references were made to the following standards:

1. Singapore Standard SS CP 5 : 1998 Code of practice for electrical installations
2. IEC 61851 Electric vehicle conductive charging system
 - Part 1:2001 General requirements
 - Part 1:2010 General requirements
 - Part 1 FDIS:2016 General requirements (Edition 3.0)
 - Part 21-2 CD:2014 EMC requirements for OFF board electric vehicle charging systems (Edition 1.0)
 - Part 22:2001 AC electric vehicle charging station
 - Part 23:2014 DC electric vehicle charging station
3. IEC 62196 Plugs, socket-outlets, vehicle connector and vehicle inlets – Conductive charging of electric vehicles
 - Part 1:2014 General requirements
 - Part 2:2016 Dimensional compatibility and interchangeability requirements for a.c. pin and contact-tube accessories
 - Part 3:2014 Dimensional compatibility and interchangeability requirements for d.c. and a.c./d.c. pin and contact-tube vehicle couplers

IEC has no responsibility for the placement and context in which the extracts and contents are reproduced in this TR, nor is IEC in any way responsible for the other content or accuracy therein.

At the time of publication, this TR is expected to be used for public charging stations for EVs including the EV Phase 2 projects led by the Economic Development Board (EDB) and Land Transport Authority (LTA).

Attention is drawn to the possibility that some of the elements of this Technical Reference may be the subject of patent rights. Enterprise Singapore shall not be held responsible for identifying any or all of such patent rights.

Technical Reference for electric vehicle charging system

Section One – General requirements and a.c. electric vehicle charging station

1.1 Scope and objective

This Technical Reference is applicable to on-board and off-board equipment for charging electric vehicles in public or private car parks, public places and private residential premises at standard a.c. supply voltages up to 1000 V and at d.c. voltages up to 1500 V.

It covers the requirements for electrical installation, functional needs and safety, and connection to the electric vehicle.

The objective of this Technical Reference is to provide guidelines for electric vehicle charging system that aligns with currently accepted international practices and takes into consideration local conditions. It states the safety requirements to protect person and property against electrical hazards.

1.2 Normative references

The following referenced documents are indispensable for the application of Section One and Section Two of this Technical Reference. For dated references, only the edition cited applies. For undated references, the latest edition (including any amendments) applies.

SS CP 5	Code of practice for electrical installations
SS 97 : Part 1 : 2005	Residual current operated circuit-breaker without integral overcurrent protection for household and similar uses (RCCBs), Part 1 : General rules
IEC 60038	IEC standard voltages
IEC 60068	Environmental testing Part 2-1 : Tests – Tests A: Cold Part 2-5 : Tests – Test Sa: Simulated solar radiation at ground level and guidance for solar radiation testing Part 2-30 : Tests – Test Db: Damp heat, cyclic (12 h + 12 h cycle) Part 2-52 : Tests – Test Kb: Salt mist, cyclic (sodium, chloride solution) Part 2-75 : Tests – Test Eh: Hammer tests Part 2-78 : Tests – Test Cab: Damp heat, steady state
IEC 60079	Explosive atmospheres
IEC 60245-1	Rubber insulated cables. Rated voltages up to and including 450/750 V Part 1 : General requirements Part 2 : Test methods Part 3 : Heat resistant silicone rubber insulated cables Part 4 : Cords and flexible cables Part 6 : Arc welding electrode cables

IEC 60309	Plugs, socket-outlets and couplers for industrial purposes Part 1 : General requirements Part 2 : Dimensional interchangeability requirements for pin and contact-tube accessories
IEC 60364-4-41	Low voltage electrical installations, Part 4-41 : Protection for safety – Protection against electric shock
IEC 60364-5-54	Low-voltage electrical installations, Part 5-54: Selection and erection of electrical equipment – Earthing arrangements and protective conductors
IEC 60529	Degrees of protection provided by enclosures (IP Code)
IEC 60664	Insulation coordination for equipment within low voltage systems, Part 1 : Principles, requirements and tests
IEC 60884	Plugs and socket-outlets for household and similar purposes Part 1 : General requirements Part 2-5 : Particular requirements for adaptors
IEC 60947	Low voltage switchgear and controlgear Part 1 : General rules Part 2 : Circuit-breakers Part 3 : Switches, disconnectors, switch-disconnectors and 307 fuse-combination units Part 4 : Contactors and motor starters – Electromechanical contactors and motor- starters
IEC 60950-1	Information technology equipment – Safety, Part 1 : General requirements
IEC 60990	Methods of measurement of touch current and protective conductor current
IEC 61000	Electromagnetic compatibility (EMC) Part 3-2 : Limits – Limits for harmonic current emissions (equipment input current ≤ 16 A per phase) Part 3-12 : Limits – Limits for harmonic currents produced by equipment connected to public low-voltage systems with input current > 16 A and ≤ 75 A per phase Part 6-1 : Generic standards – Immunity for residential, commercial and light-industrial environments Part 6-3 : Generic standards – Emission standard for residential, commercial and light-industrial environments
IEC 61008-1	Residual current operated circuit-breakers without integral overcurrent protection for household and similar uses (RCCBs) – General rules
IEC 61009-1	Residual current operated circuit-breakers with integral overcurrent protection for household and similar uses (RCBOs) – General rules
IEC 61140	Protection against electric shock. Common aspects for installation and equipment
IEC 61180-1	High-voltage test techniques for low voltage equipment, Part 1 : Definitions, test and procedure requirements

IEC 61316	Industrial cable reels
IEC 61439-1	Low voltage switchgear and controlgear assemblies, Part 1 : General rules
IEC TS 61439-7	Low-voltage switchgear and controlgear assemblies, Part 7 : Assemblies for specific applications such as marinas, camping sites, market squares, electric vehicles charging stations
IEC 61508 (all parts)	Functional safety of electrical/electronic/programmable electronic safety-related systems
IEC 61540	Electrical accessories – Portable residual current devices without integral overcurrent protection for household and similar use (PRCDs)
IEC 61558-1	Safety of power transformers, power supplies, reactors and similar products, Part 1 : General requirements and tests
IEC 61558-2-4	Safety of transformers, reactors, power supply units and similar products for supply voltages up to 1100 V, Part 2-4 : Particular requirements and tests for isolating transformers and power supply units incorporating isolating transformers
IEC 61810-1	Electromechanical elementary relays, Part 1 : General requirements
IEC 61851	Electric vehicle conductive charging system Part 1 : General requirements Part 21 : Electric vehicle requirements for conductive connection to an a.c./d.c. supply Part 23 : DC electric vehicle charging station Part 24 : Digital communication between a d.c. EV charging station and an electric vehicle for control of d.c. charging
IEC 62196	Plugs, socket-outlets, vehicle connectors and vehicle inlets – Conductive charging of electric vehicles Part 1 : General requirements Part 2 : Dimensional compatibility and interchangeability requirements for a.c. pin and contact-tube accessories Part 3 : Dimensional compatibility and interchangeability requirements for d.c. and a.c./d.c. pin and contact-tube vehicle couplers
IEC 62262	Degrees of protection provided by enclosures for electrical equipment against external mechanical impacts (IK Code)
IEC 62335	Circuit breakers – Switched protective earth portable residual current devices for class I and battery powered vehicle applications
IEC 62752	In-cable control and protection device for mode 2 charging of electric road vehicles (IC-CPD)
IEC CISPR 11	Industrial, scientific and medical equipment – Radio-frequency disturbance characteristics - Limits and methods of measurement

IEC CISPR 16	Specification for radio disturbance and immunity measuring apparatus and methods Part 1-2 : Radio disturbance and immunity measuring apparatus – Coupling devices for conducted disturbance measurements Part 2-3 : Methods of measurement of disturbances and immunity – Radiated disturbance measurements
ISO 6469-2	Electrically propelled road vehicles – Safety specifications, Part 2 : Vehicle operational safety means and protection against failures
ISO 15118-3	Road vehicles – Vehicle to grid communication interface, Part 3 : Physical and data link layer requirements
ISO 17409	Electrically propelled road vehicles – Connection to and external electric power supply – Safety requirements
SAE J1772	Electric vehicle conductive charge coupler
Transmission Code of Singapore (available online)
